WHEREAS, upon successful enactment of Oconee County Ordinance 2012-24, creating the rescue squad advisory commission and the fire services advisory commission, there will no longer be a need for the emergency management commission to provide advisory services to Oconee County; and

AGENDA ITEM SUMMARY  
OCONEE COUNTY, SC

COUNCIL MEETING DATE: June 5, 2012  
COUNCIL MEETING TIME: 6:00 PM

**ITEM TITLE OR DESCRIPTION:**

First Reading [in title only] of Ordinance 2012-26 "AN ORDINANCE TO AMEND CHAPTER 38 "ZONING" OF THE OCONEE COUNTY CODE OF ORDINANCES, INCLUDING ALL ZONING MAPS INCORPORATED THEREIN AND THEREBY, IN CERTAIN LIMITED REGARDS AND PARTICULARS, ONLY; AND OTHER MATTERS RELATED THERETO."

**BACKGROUND OR HISTORY:**

On May 1, 2012, County Council took First Reading (in title only) on Ordinance 2012-20 and Ordinance 2012-22, each of which authorizes the transfer of property currently within the boundary of the Echo Hills Industrial Park. When transferred, the property will be occupied by 2 single-family residences, one of which is in place and will remain as is; and the other relocated from another location on the land to the second parcel. Due to the fact that the land is currently zoned in the Industrial District (ID), the existing residence will be considered a non-conforming use, but the relocation of the residence onto the second new parcel is not permitted. Ordinance 2012-26 will initiate a rezoning of both parcels that will bring them into conformity with County standards.

**SPECIAL CONSIDERATIONS OR CONCERNS:**

Given the proximity of water, sewer, and relatively easy access to an arterial highway, it is recommended Council consider placing the parcels into a zoning district such as the Residential District or the Agricultural-Residential District in order to limit the potential negative impacts of future conversion of the parcels to a commercial use that may prove detrimental to Echo Hills Industrial Park.

Title: Cisco ASR Routers for Broadband Project

Department: Information Technology

Amount: \$336,181.06

**FINANCIAL IMPACT:**

- COOPERATIVE PROCUREMENTS: SC State Contract # 4400002804
- GRANT FUNDING: Utilizing Matching Funds:  Yes  No / Grant Amount: \$9.6M , total amount with matching \$14,306,764.00  
Source: Federal ARRA grant  
Finance Approval: *Sally R. Sawyer* Grant Approval: \_\_\_\_\_

**BACKGROUND DESCRIPTION:**

On August 18, 2010, Oconee County received \$9.6M in Federal ARRA funding to construct a 270 mile (approximate) broadband network in the County. This project will provide critical broadband infrastructure that will benefit the County through connection of 164 Anchor Institutions and by providing much needed high speed data.

The Broadband team has reviewed various vendors on State Contract that provide routing equipment and selected Cisco ASR equipment to function as the core routers for the FOCUS Broadband network. These two routers will provide routes, IP addresses, and VLANs (Virtual Local Area Networks) for the entire network. Installation and Implementation Services will be provided by the vendor.

**SPECIAL CONSIDERATIONS OR CONCERNS:**

The Broadband team budgeted \$600,000 for the routers and this purchase is under this budget. State Contract vendors must be certified by Cisco to sell the ASR series equipment. Attached is an email from Cisco stating that Internetwork Engineering is certified to sell ASR equipment. Also attached is a spreadsheet showing the standard discount of 37% on State Contract would result in an overall equipment price of \$632,392.00. Internetwork Engineering's quoted price of \$315,651.94 gives an additional savings of \$316,904.06.

**ATTACHMENT(S):**

It is the staff's recommendation that Council approve the purchase of Cisco ASR Core Routers, to Internetwork Engineering of Charlotte, NC, in the amount of \$336,181.06, per SC State Contract #4400002804.

**Subject:** Core Routing Project

Dear Robin,

I wanted to follow up on our meeting last week regarding purchasing Cisco products for your Core routing project. The solution that the County is considering is our high end, Service Provider routing solution in the ASR series. Partners are required to go through Cisco certifications on various solutions to ensure customer satisfaction.

Not all partners are certified to sell the ASR's. One that is on State contract is Internetwork Engineering and they have been working with us to propose the solution.

Please let me know if you have any questions about the certification requirements at Cisco.

Thank you for allowing us the opportunity to work with you on so many different projects. We value your business and look forward to a continued partnership.

Sincerely,  
Milbre Dorn

Re: Planning Commission Recommendation Regarding Proposed Memorandum  
of Understanding with Duke Energy

This is to inform you that the Planning Commission took up the matter of the proposed memorandum of understanding with Duke Energy at their regular meeting on May 7, 2012. It should be noted that, although the Commission originally supported the idea of pursuing the issue, and recommended Council approve exploring the development of a MOU, the consensus of the majority of the commissioners is that it is not necessary at this time. After discussion and consideration, the Commission voted 5-1 to recommend against development of a MOU with Duke Energy.

Please do not hesitate to contact me for more information.

From: Swain Still – Solid Waste Director  
RE: Summary of Oil/Water Separator for Transfer Station

In 1998, the Oconee County Transfer Station was built in order to transfer municipal solid waste (MSW) from Oconee County to a permitted MSW landfill. The transfer station floor and equipment has to be washed down several times each week. The resulting waste water enters floor drains that are connected to the Oconee Regional Sewer Authority's sewer system. The authority required the transfer station to have an oil/water separator to remove certain contaminants before they reach the sewer system. This is a simple pre-treat system without falling under the pre-treat guidelines. The oil/water separator removes petroleum products, as well as, vegetable and animal oils. It also has debris screens to remove any debris that may be washed down from the transfer station.

The oil/water separator has had several on-going problems from the initial installation. First, the separator is approximately 2,000 gallons and is designed for a continual flow operation. However, the transfer station is only washed down about three times per week with less than 500 gallons of water per occurrence. This result in the water not being pushed through the separator fast enough which leads to extensive odor problems in the sewer line behind the Solid Waste Complex, Motor Pool, and the Roads and Bridges Departments. Second, due to the water not being pushed through properly, the separator continually has a lot of build up that requires it to be pumped out too often. Last of all, the separator is a standard steel tank that has deteriorated to the point the walls and baffles are crumbling. The waste water is very corrosive and has eaten holes completely through portions of the tank.

In November, the Sewer Authority was contacted and Mr. Ed Mize came and inspected our separator and options were discussed. Options as to whether or not the separator was still needed. Tests were conducted over the past 6 months and different variables were tested such as allowing a small stream of water to run continually during operating hours, placing different screens in the floor drains, and washing down more frequently. If these variables would have worked, the Solid Waste Director had hopes of redesigning the system eliminating the separator all together. However, the oil concentrations

were lowered to right at the limits but were not able to keep them below the limits. Therefore, in mid-May, the Sewer Authority decided it would be best to replace the system with something similar to what we have now.

In doing our research on the separator, we have determined that we can purchase a batch type separator made of stainless steel that should meet the needs of the Sewer Authority and help correct the above mentioned issues. A batch separator is only designed for the largest anticipated flow over a 30 minute time frame and is designed to push all waste water through the separator and have only clean water remain inside. This would eliminate the odors as well as the buildup of material. The stainless steel would give it an estimated life of between 25-30 years. The stainless steel does increase the cost, but other options such as concrete and standard steel tanks would have shorter expected lives and may not be covered by warranties due to the corrosiveness of the wastewater.
